

Solid Cover Drain Options

■ **INVIS-A-DRAIN** - The Invis-A-Drain is constructed with 1/4" drain holes placed every 6" in reinforced vinyl down the center of the cover. Beneath is a 12" wide mesh drain panel designed to allow water to drain through while filtering out small debris. Invis-A-Drain comes standard on all custom Hyperlite covers.

■ **SURE-FLO™ FULL LENGTH DRAIN** - The Sure-Flo™ drain is created using ProMesh fabric that runs the full length of the pool, down the center of the cover, increasing the surface drainage area while blocking sunlight, dirt and debris from getting into your pool. "Sure-Flo" drain comes standard on all Stock Hyperlite covers.

PUMP AVAILABLE

■ Prefer a pump in lieu of a drain? GLI offers pumps as an alternative to our Invis-A-Drain or Sure-Flo Drain systems.

ASTM: All of GLI's Safety Covers meet or exceed the standards set forth in ASTM F 1346-91 for commercial and residential installations.
